

SystemMessageType In Maarg

Based on the `maarg` codebase, the framework uses the `moqui.service.message.SystemMessageType` entity to handle asynchronous integrations, data feeds, and API interactions with external systems like Shopify, OMS, POORTI, and ERPs.

Here is a breakdown of the different types of system messages configured, grouped by their domain and purpose:

1. Financial Feeds

These messages are used to generate and send financial transaction data to external systems or SFTPs:

- **SalesFinancialFeed**
- **ReturnsFinancialFeed** (and specific types like `InStoreReturnsFinancialFeed`, `EcomReturnsFinancialFeed`)
- **AppeasementsFinancialFeed**

2. Order Fulfillment & Sync Feeds

These handle the data flow for order items across different fulfillment stages and facilities:

- **Fulfilled Items:** `FulfilledOrderItemsFeed`, `StoreFulfilledOrderItemsFeed`, `WHFulfilledOrderItemsFeed`, `TransferOrderFulfilledItemsFeed`, `ErpFulfilledOrderItemsFeed`
- **Brokered Items:** `BrokeredOrderItemsFeed`, `WHBrokeredOrderItemsFeed`
- **Specific Channels:** `PosStoreFulfilledOrderItemsFeed`, `EcomStoreFulfilledOrderItemsFeed`

3. Inventory & Variance Feeds

Messages that synchronize inventory levels, delta changes, and discrepancies:

- **Inventory Sync:** `HotWaxShopifyInventoryFeed`
- **Delta Feeds:** `StoreBrokeredInventoryDeltaFeed`, `StoreCancelledInventoryDeltaFeed`
- **Variances:** `InventoryItemVarianceFeed`, `DoNotHaveInventoryVarianceFeed`, `InventoryCycleCountVarianceFeed`

4. Receipts & Shipments

These track the movement of goods in and out of facilities:

- **Shipments:** `ShipmentsReceiptFeed`, `ReturnsShipmentFeed`
- **Transfer Orders (POORTI/OMS):** `TransferOrdersReceiptFeed`, `OMSCreateTOShipmentFeed`, `OMSUpdateTOShipmentFeed`
- **Purchase Orders:** `PurchaseOrdersReceiptFeed`

5. Cycle Counts

Used for importing and exporting warehouse cycle count data:

- `ImportInventoryCounts`
- `ExportInventoryCounts`

6. Shopify Integration (`mantle-shopify-connector`)

A large subset of messages are specifically dedicated to Shopify GraphQL and REST operations:

- **Bulk Operations (Parents):** `ShopifyBulkImport`, `ShopifyBulkQuery`, `BulkOperationsFinish`
- **Webhooks:** `ShopifyWebhook`, `DeleteWebhookSubscription`
- **Fulfillments:** `CreateShopifyFulfillment`, `OMSFulfillmentFeed`, `SendShopifyFulfillmentAck`
- **Products & Tags:** `ProductTagsFeed`, `BulkUpdateProductTags`, `BulkVariantsMetafieldQuery`
- **Orders & Metafields:** `BulkOrderMetafieldsQuery`, `BulkOrderHeadersQuery`, `BulkOrderItemsQuery`, `OrdersUpdated`, `GenerateOrderRestJsonFeed`, `GenerateNewOrdersFeed`
- **Returns & Refunds:** `OMSSyncedRefundsFeed`, `SendShopifyReturnReasonFeed`, `GenerateReturnsAndExchangeFeed`, `GenerateAppeasementsFeed`
- **Gift Cards:** `GiftCardActivationFeed`, `BulkCreateGiftCards`

These message types define the input/output paths (like SFTP directories), the services used to generate or consume the messages, and their relationships (such as using `LocalFeedFile` as a parent type).
